

Location Based Servi

Imagine an API that allows you to integrate real-time mobile phone location into your existing software in hours.

Imagine a solution that gives your software a distinct competitive advantage and generates a hassle free ongoing revenue stream without investing in any additional billing infrastructure.

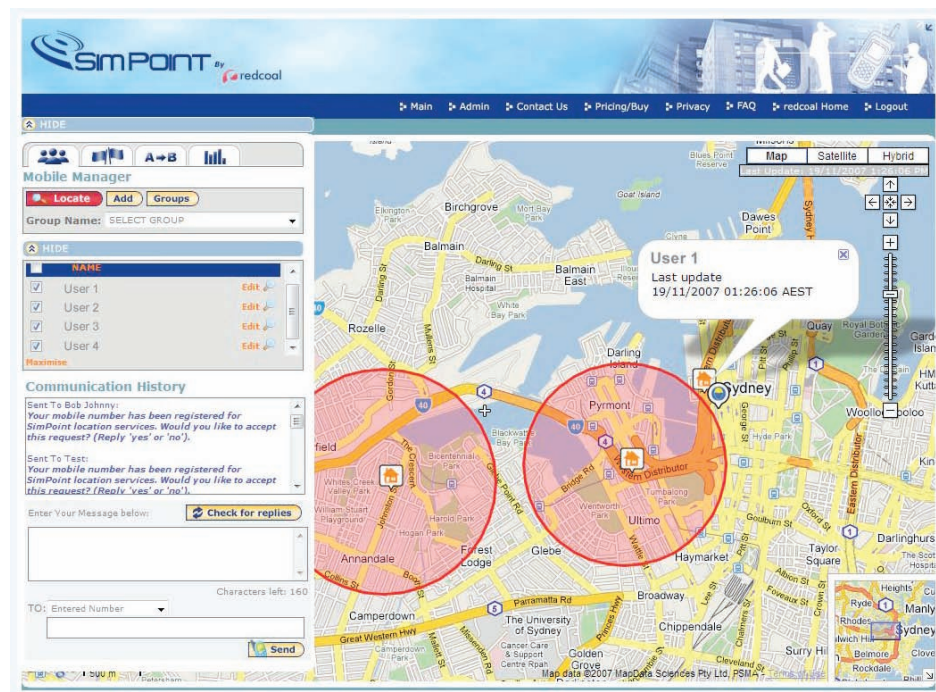

Imagine the possibilities...!!

Integration with A Few Lines of Code...

SimPoint API allows programmers and web designers to integrate the latest mobile phone location technology into existing software applications or websites in hours and generate revenue based customer usage.

Features and Benefits...

- Reduced development costs – requires no expensive integration with multiple telecommunications carriers.
- Advanced white labelled billing system allows redcoal to bill your customers for you, meaning you do not have to invest in expensive transactional billing infrastructure.
- Locates standard mobile phones, meaning your customers do not require any additional hardware.
- SOAP/XML.
- Code Examples in C#
- Royalty free with 4 hours technical support included.
